

How to use Tick Grease correctly

Tick grease is a tick-destroying agent used to supplement dipping by spot application on an animal.

When to use tick grease

- * To kill ticks in between dippings.
- * During periods of heavy rains.
- * On animals that fail to attend dipping

How to correctly apply tick grease

- * Restrain animals adequately
- * Clip or shave off hairs on areas to be treated.
- * Apply thinly and evenly by hand to tick feeding sites such as: the inside surface of the ears, under the tail, udder and on the tail brush or such other areas of the body where there are visible ticks.

Tick grease should not be used as the only method for tick control but should be used to augment dipping!
